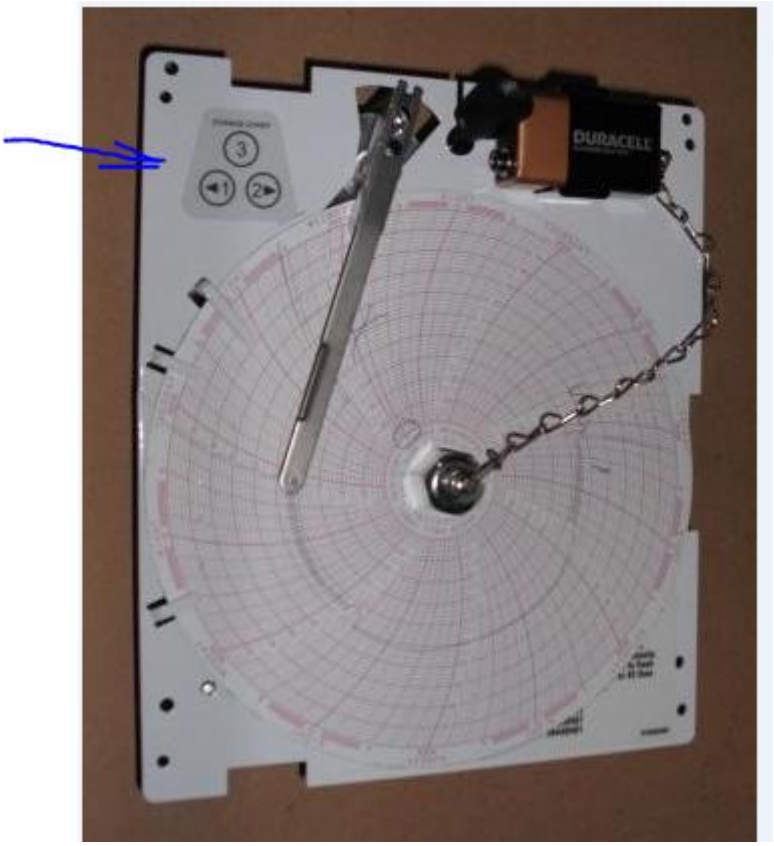
Chart Recorder Temperature Calibration

Subject: How do I calibrate my Chart Recorder Temperature?

Seven Day Chart Recorder
Revision Date: January 1, 2014
Calibration of Chart Recorder

Question – How do I calibrate my chart recorder?

Answer - If an adjustment is required, use the left (#1) and right (#2) arrow push buttons on the recorder to calibrate (or move) the pen's position on the chart to correspond to the correct cabinet temperature. The arrow buttons must be held for approximately five (5) seconds before the pen will begin to move.


Once the pen arm matches the correct temperature value on the chart paper release pressure from the arrow button.
