

# Aldrich Aldehydes and Ketones FT-IR Spectral Library, Edition 2

## *Introduction*

The Aldrich Aldehydes and Ketones Library consists of 1311 FT-IR spectra of substances, most of which are pure organic compounds. This library is a partial listing of the Aldrich FT-IR Collection, Edition 2. The spectra were originally acquired at 2 cm<sup>-1</sup> spectral resolution, and then mathematically deresolved when converted to Nicolet library format.

The spectra are listed in this document in alphabetical order by compound name. The index number of each spectrum appears to the left of the name. If you are using Nicolet's OMNIC spectroscopy software, the molecular formula, CAS (Chemical Abstracts Services) registry number, when known, and the location number of the printed spectrum in *The Aldrich Library of FT-IR Spectra, Edition II* (Sigma-Aldrich Co., 1997) are available on-line. The Aldrich location number is in the form:

<volume number> - <page number> <spectrum letter>

For example, the spectrum with the location number 1-234B refers to the second (B) spectrum on page 234 of Volume 1.
