

Sigma Steroids FT-IR Spectral Library

Introduction

The Sigma Steroids Library contains 3011 FT-IR spectra of a wide variety of natural and synthetic steroids. The steroids and spectra were obtained and provided by Sigma Chemical Company. The spectra of steroids not available from Sigma were obtained from samples provided to Sigma by the United Kingdom Medical Research Council.

The spectra are listed in this document in alphabetical order by compound name. The index number of each spectrum appears to the left of the name. If you are using the library with Nicolet's OMNIC spectroscopy software, the molecular formula for each compound is available on-line.

The spectra were measured from KBr pellets at 2 cm⁻¹ digital resolution. The spectra were mathematically deresolved when converted to Nicolet library format.

The following table gives the skeletal classifications for the index number ranges.

<i>Index # range</i>	<i>Skeletal Classification</i>
1-104	Estrane
105-1074	Androstane
1075-1182	Etianic acid
1183-2099	Pregnane
2100-2125	Cardane, Cardenolide
2126-2321	Cholane, Cholanic acid
2322-2682	Cholestane, Spirostane
2683-2949	Ergostane, Lumistane, Campestone
2950-2976	Stigmastane, Poriferastane
2977-3006	Lupane, Ursane, Oleanane, etc.
3007-3011	Steroid analogs
