# Service Manual

Mod.: R14X-GAEV-TS

Rev. B Date: 08/02/2013

# Model: R14X-GAEV-TS

# **HCFCs and CFCs Free**

# R14X-GAEV-TS

# **Standard Features**

- Electronic controller EVK214
- Max 2 probes
- Probe alarm error
- Traditional cooling unit (not monoblock)
- Automatic defrost
- Basin for condensate water
- Gas R404A
- Insulation 50mm
- Exterior made of white plastificated anticorrosion treated steel
- Interior made of "Sanisteel" with active antibacterial properties
- 2 Door
- Door lock
- Plastificated shelf (530x650mm)
- Small wheels
- EU Plug
- Stability brackets
- Dry contacts for external alarm

# Model: R14X-GAEV-TS

# **HCFCs and CFCs Free**

# ARCHITECT CORNER

# STANDARD FEATURES

#### **DESIGN**

All models of Thermo Scientific refrigerators and freezers are made in Italy in ISO9001,14001 certified factory. They are constructed for heavy-duty use and have user-friendly design. The choice of best production technologies and materials guarantees their long and trouble-free life.

## **CABINET CONSTRUCTION**

Body insulation is made polyurethane (CFC/HCFC free) with thickness of 50mm. Rounded internal corners to facilitate cleaning and maintenance.

# **REFRIGERATION SYSTEM**

Traditional system (CFC free) - Gas R404a. Thermostatic valve for monoblock and negative temperature versions. Evaporator and condenser are designed to guarantee lowenergy consumption and equipped with ventilator and helical fan. Ermetique compressor with thermo-overload protection. Ventilated cooling to maintain stable temperature inside refrigerator even when frequent openings of door. Possibility to adjust temperature from +2°C to +16°C and -10°C to -25°C for freezer versions. Control panel is mounted on top to be easy read and reached for eventual regulation.

#### **SHELVING**

Plastificated grid shelves.

#### **MODEL FEATURES**

Electronic controller

#### **DOORS**

Ergonomic door handle with possibility to open with one hand only, removable magnetic gaskets.

### **ELECTRICAL**

230V/50Hz AC

#### PREPARATIONS

#### 1.1 Important

Please read these instructions carefully prior to installation and use, and follow all the precautions for installation and electrical connections; keep these instructions with the device for future consultation.

#### 1.2 Installazion

For the panel, using the snap-on brackets supplied; the dimensions

Recommendations for installation:

- the panel thickness must not exceed 8.0 mm (0.314 in)
- ensure that the operating conditions (operating temperature, humidity, etc.) are within the limits indicated in the technical data sheets
- do not install the device near to any sources of heat (heating elements, hot air conduits, etc.), equipment containing powerful magnets (large diffusers, etc.), areas affected by direct sunlight, rain, humidity, excessive dust, mechanical vibration or shock
- in compliance with safety regulations, the device must be installed correctly, and in such a way as to protect against any contact with electrical parts; all safety devices must be fixed so that they cannot be removed without the use of tools

#### 1.3 Electrical connections

With reference to the electrical circuit diagram:

- the service controlled by the fourth output depends on param. P4
- the service controlled by the fourth output depends on param. u1
- port 1 (by request) is the serial port used for communication with the monitoring system (by means of a serial interface, via TTL, using the MODBUS communication protocol) or with the programming key; the port must not be used for both purposes simultaneously
- port 2 (by request) is the port used for comm. with the remote indicator; the indicator displays the quantity assigned by parameter P6.

Points to note in relation to electrical connections:

- do not use electric or pneumatic screw-wrenches on the terminal board
- if the device has been moved from a cold to a warm environment. condensation may have formed inside; please wait approx. one hour prior to switching on
- ensure that the voltage, frequency and operational power of the device are compatible with the local power supply
- disconnect the power prior to proceeding with any kind of maintenance operation
- do not use the device as a safety device
- for repairs and any information relating to the device, contact the Evco dealer network

#### **USER INTERFACE**

#### 2.1 Introductory comments

The device has the following operational states:

- "on" (power is connected and the device is on: the regulators may
- "stand-by" (power is connected but software sets the device to off: the regulators are switched off; the option of manually switching on/off the cabinet light or the auxiliary output depends on param-

The term "switching on" is understood to mean switching from the stand-by state to on; the term "switching off" is understood to mean switching from the on state to the stand-by state.

When the device is switched on, the status it was in when the power was interrupted is restored.

#### 2.2 Manual switching on/off of the device

• ensure the keyboard is not blocked and that no procedures are running

■ press for 4 s.

It is also possible to switch the device on/off using the multifunction input.

#### 2.3 The display

If the device is switched on, then during normal operation the display will show the quantity assigned by parameter P5:

- if P5 = 0, the display will show the temperature of the cabinet
- ullet if P5 = 1, the display will show the operational setpoint
- $\bullet$  if P5 = 2, the display will show the evaporator temperature
- $\bullet$  if P5 = 3, the display will show "cabinet temperature evaporator temperature"
- $\bullet$  if P5 = 4, the display will show the temperature detected by the auxiliary probe (only if parameter P4 is set to 1 or 2).

While in stand-by mode the display is switched off.

# 2.4 Displaying the cabinet temperature

- ensure the keyboard is not blocked and that no procedures are running
- press for 2 s: the display will show the first available label
- press or to select "Pb1"
- press set

To exit the procedure

- press(set) or do not operate the keypad for 60 s
- press or until the display shows the quantity assigned by parameter P5 or do not operate the keypad for 60 s

Alternatively

press (%)

#### 2.5 Displaying the evaporator temperature

- ensure the keyboard is not blocked and that no procedures are running
- ullet press ullet for 2 s: the display will show the first available label
- press or to select "Pb2"
- press**set**

To exit the procedure:

- press**set**) or do not operate the keypad for 60 s
- press or until the display shows the quantity assigned by parameter P5 or do not operate the keypad for 60 s

Alternatively

■ press 🙌

If there is no evaporator probe (parameter P3 = 0), label "Pb2" will not be displayed.

#### 2.6 Displaying the temperature detected by the auxiliary probe (only if parameter P4 is set to 1 or 2)

- ensure the keyboard is not blocked and that no procedures are running
- press for 2 s: the display will show the first available label
- press▲ or ▼ to select "Pb3"

■ press set

To exit the procedure:

- press(set) or do not operate the keypad for 60 s
- press or vuntil the display shows the quantity assigned by parameter P5 or do not operate the keypad for

Alternatively

■ press (♦)

If the function of the fourth input is not that of the auxiliary probe (parameter P4 = 0 or 3), then label "Pb3" will not be displayed.

#### 2.7 Manual activation of defrosting

ensure the keyboard is not blocked and that no procedures are running

■ press for4 s.

If the function of the evaporator probe is that of the defrosting probe (parameter P3 = 1) and on activation of defrosting the evaporator temperature is above that established by parameter d2, then defrosting will not be activated

#### 2.8 Manual switching on/off of the cabinet light (only if parameter u1 is set to 0)

• ensure no procedures are running

■ press (💔)

It is also possible to switch the cabinet light on/off remotely using the microport and multifunction inputs; see also parameter u2.

# 2.9 Switching on the demister (only if parameter u1 is set

- ensure the device is switched on and no procedures are running
- press for 2 s: the demister heater will be switched on for the period of time established by parameter u6.

Manual switching off of the demister is not permitted.

#### Manual switching on/off of the auxiliary output (only if parameter u1 is set to 2)

ensure the keyboard is not blocked and that no procedures are running

press (%)

It is also possible to switch the auxiliary output on/off using the multifunction input.

If the auxiliary output has been switched on manually, then it will be permitted to switch it off the same way (the same principle applies for remote switching on); see also parameter u2.

#### Blocking/unblocking the keyboard 2.11

To block the keyboard:

- ensure no procedures are running
- press**set** and **v** for 2 s: the display will show "**Loc**" for 1 s.

If the keyboard is blocked, it will not be possible to:

- manually switch the device on/off
- display the cabinet temperature (using the procedure indicated in paragraph 2.4)
- display the evaporator temperature (using the procedure indicated in paragraph 2.5)
- procedure indicated in paragraph 2.6)
- · manually activate defrosting
- manually switch the auxiliary output on/off
- view information pertaining to the HACCP alarms
- delete the HACCP alarm list
- modify the date and time
- change the operational setpoint using the procedure indicated in paragraph 3.2 (the operational setpoint may also be set by means of
- display the total hours of compressor operation
- delete the total hours of compressor operation.

These operations will cause the label "Loc" to be displayed for 1 s. To unblock the keyboard:

■ press(set) and ▼ for 2 s: the display will show "UnL" for 1 s.

# Buzzer mute

ensure no procedures are running

• press any key (the first key press does not trigger the associated effect). If parameter u1 is set to 4 (or the service controlled by the fourth output is the alarm output) and parameter u4 is set to 1, then pressing he key will also deactivate the alarm output.

# SETTINGS

#### 3.1 Setting the date and time (clock)

- ensure the keyboard is not blocked and that no procedures are runnina
- press for 2 s: the display will show the first available label
- press or to select "rtc"

To modify the year

 ${\color{red}\bullet}$  press  ${\color{red}\underline{\textbf{set}}}$  within 60 s: the display will show " ${\color{red}\textbf{y}}{\color{red}\textbf{y}}$ " followed by the last two digits of the year

■ press or within 15 s.

To modify the month

press**set** within 15 s: the display will show "**nn**" followed by the two digits for the month

• press ▲ or ▼ within 15 s.

To modify the day of the month:

• press**(set)** within 15 s: the display will show "**dd**" followed by the two digits for the day

■ press or within 15 s.

To modify the hour: • press**(set)** within 15 s: the display will show "**hh**" followed by the two digits for the hour

■ press or within 15 s.

To modify the minutes:

• press**(set)** within 15 s: the display will show "**nn**" followed by the two digits for the minutes

■ press or within 15 s

• press set or do not operate the keypad for 15 s.

To exit the procedure:

ullet press lack lack or lack lack lack until the display shows the quantity assigned by parameter P5 or do not operate the keypad for

Alternatively

■ press 🙀

#### 3.2 Setting the operational setpoint

- ensure the keyboard is not blocked and that no procedures are running
- press**set** the LED **&** will flash
- press or within 15 s; also see parameters r1, r2 and r3 presset or do not operate the keypad for 15 s.

It is also possible to set the operational setpoint by means of parameter

# 3.3 Setting the configuration parameters

To access the procedure:

- ensure no procedures are running
- press and v for 4 s: the display will show "PA"
- press set
- press or within 15 s to set "-19"
- press set or do not operate the keypad for 15 s
- press and ▼ for 4 s: the display will show "SP"

To select a parameter

- press▲ or ▼ To select a param
- press set
- press or within 15 s
- pressset or do not operate the keypad for 15 s.

To exit the procedure:

• press ▲ and ▼ for 4 s or do not operate the keypad for 60 s. Interrupt the device power supply after altering the parameters.

#### 3.4 Resetting configuration parameter default values

- ensure no procedures are running
- press and for 4 s: the display will show "PA"
- press<u>set</u>
- press or within 15 s to set "**743**"
- press set or do not operate the keypad for 15 s
- press and ▼ for 4 s: the display will show "dEF"
- press set
- press or within 15 s to set "149"
- press set or do not operate the keypad for 15 s: the display will flash "dEF" for 4 s, after which the device will exit the proce-
- interrupt the power to the device

#### Ensure that the parameter default values are appropriate, particularly if the probes are PTC type.

#### HACCP

# 4.1 Introductory comments

The device is capable of storing up to 9 HACCP alarms, after which the most recent alarm will overwrite the oldest.

The device can furnish the following information

- the critical value
- the data and time at which the alarm occurred
- the alarm duration (from 1 minute to 99 hours and 59 minutes, partial if the alarm is ongoing)

| CODE | ALARM TYPE (AND CRITICAL VALUE)                         |
|------|---|
| AL   | minimum temperature alarm (the minimum temperature      |
|      | of the cabinet or the minimum temperature detected by   |
|      | the auxiliary probe during the alarm state)             |
| AH   | maximum temperature alarm (the maximum temperature      |
|      | of the cabinet or the maximum temperature detected by   |
|      | the auxiliary probe during the alarm state)             |
| id   | microport input alarm (the maximum temperature of the   |
|      | cabinet during the alarm state); see also parameter i4  |
| PF   | power failure alarm (the temperature of the cabinet on  |
|      | restoration of the power supply); see also parameter AA |

## Warnings:

- the device records minimum temperature alarms and maximum temperature alarms providing the temperature associated with the alarm is the cabinet temperature (parameters A0 and A3 = 0) or the temperature measured by the auxiliary probe, providing its function is that of display probe (parameter P4 = 1 and parameters A0 = 2 and A3 = 1)
- in order to avoid repeatedly recording power failure alarms, disconnect the device power supply while in stand by
- if the duration of a power failure alarm is such as to cause a clock error, then the device will not provide any information regarding alarm duration
- no alarms will be recorded if the device is in stand-by mode.

When the cause of the alarm is resolved, the display returns to normal, except in the case of a power failure alarm where normal display function must be restored manually.

To restore the normal display manually

press any key.

If parameter u1 is set to 4 (or the service controlled by the fourth output is the alarm output), then pressing any key will also deactivate the alarm output.

The HACCP LED provides information relating to the status of the HACCP alarm memory; please refer to paragraph 6.1

#### 4.2 Viewing HACCP alarm information

To access the procedure:

- ensure the keyboard is not blocked and that no procedures are
- ${\color{red} \bullet}$  press  ${\color{red} \blacktriangledown}$  for 2 s: the display will show the first available label
- press ▲ or ▼ to select "**LS**"

• press(set) the display will show the most recent alarm code, or one of the codes reported in the table in paragraph 4.1 followed by the number "1" (the higher the number following the code, the older the alarm).

To select an alarm:

• press or (to select "AH3" for example). To display the information relating to the alarm:

• press**set**) the **HACCP** LED will stop flashing and remain on and the display will show the following information in succession (for example):

|      | sion from exemple;  |
|------|---|
| INFO | MEANING   |
| 8,0  | the critical value is 8.0 °C/8 °F                           |
| StA  | the display is about to show the data and time at which the |
|      | alarm occurred  |
| y07  | the alarm occurred in 2007 (continued)                      |
| n03  | the alarm occurred in the month of march (continued)        |
| d26  | the alarm occurred on 26 March 2007                         |
| h16  | the alarm occurred at 16 hours (continued)                  |
| n30  | the alarm occurred at 16:30 hours                           |
| dur  | the display is about to show the alarm duration             |
| h01  | the alarm lasted for 1 hour (continued)                     |
| n15  | the alarm lasted for 1 hour and 15 minutes                  |
| АНЗ  | the selected alarm  |
|      |   |

The display shows each piece of information for 1 s

To exit the information series:

• press the display will show the selected alarm.

To exit the procedure:

- exit the information series
- press or until the display shows the quantity assigned by parameter P5 or do not operate the keypad for

#### Alternatively

If the instrument has stored no alarm, the label "LS" will not be shown.

#### 4.3 Deleting the HACCP alarm list

- ensure the keyboard is not blocked and that no procedures are
- ullet press ullet for 2 s: the display will show the first available label
- press or ▼ to select "**rLS**"
- press set
- press or within 15 s to set "149"
  press set or do not operate the keypad for 15 s: the display will flash "----" for 4 s and the **HACCP** LED will be turned off, after which the device will exit the procedure

If the instrument has stored no alarm, the label "rLS" will not be shown.

#### **COMPRESSOR OPERATION TIME COUNTER**

## 5.1 Introductory comments

The device is capable of recording up to 9,999 hours of compressor function, after which the number "9999" flashes

# 5.2 Displaying the compressor operation time

- ensure the keyboard is not blocked and that no procedures are running
- ullet press ullet for 2 s: the display will show the first available label
- press or to select "CH"
- press**set**

To exit the procedure:

- press(set) or do not operate the keypad for 60 s
- press or until the display shows the quantity assigned by parameter P5 or do not operate the keypad for 60 s

#### Alternatively:

■ press 🙌

#### 5.3 Resetting the compressor operation time

- ensure the keyboard is not blocked and that no procedures are
- press for 2 s: the display will show the first available label
- press or ▼ to select rCH"
- press set
- press or within 15 s to set "149"
- press set or do not operate the keypad for 15 s: the display will flash "----" for 4 s, after which the device will exit the procedure.

#### **INDICATORS** 6.1 Indicators

# LED MEANING

| <b>₩</b> | compressor LED  |
|----------|---|
| •••      | if on then the compressor is on                       |
|          | if flashing:  |
|          | the operational setpoint is being changed             |
|          | compressor protection is ongoing (parameters C0, C1,  |
|          | C2 and i7)  |
| ₩        | defrosting LED  |
| 4.       | if on, defrosting ongoing                             |
|          | if flashing:  |
|          | defrosting has been requested, but compressor protec- |
|          | tion is ongoing (parameters C0, C1 and C2)            |
|          | drip-draining is ongoing (parameter d7)               |
|          | refrigerant fluid heating is ongoing (parameter dA)   |
| <b>®</b> | Evaporator fan LED                                    |
| _        | if on then the evaporator fan is on                   |
|          |   |

if flashing, then evaporator fan stop is ongoing (parameter

#### HACCP LED

if on, you will have not shown all the information on the HACCP alarms

if flashing, the instrument will have stored at least one new HACCP alarm

if off, you will have shown all the information on the HACCP alarms or you will have cancelled the list of the HACCP

#### alarms Maintenance LED

if on, compressor maintenance will be required (parameter C10)

alarm LED if on, an alarm state or an error is ongoing

on/stand-by LED (1)

if on, the device is in stand-by mode

degree Celsius LED if on, the unit of measurement for temperature is degrees

Celsius (parameter P2) if flashing, then the Energy Saving function is in operation (parameters r4, i5, HE1 and HE2)

degree Fahrenheit LED

if on, the unit of measurement for temperature is degrees Fahrenheit (parameter P2)

if flashing, then the Energy Saving function is in operation (parameters r4, i5, HE1 and HE2)

Multifunction LED NE/)

#### parameter u1 is set to 0 (i.e. the service controlled by the fourth output is the cabinet light)

if on, the cabinet light will have been switched on manu-

if flashing, the cabinet light will have been turned on remotely (parameter i0)

#### parameter u1 is set to 1, 4, 5, 6 or 7

if on, the service controlled by the fourth output will be parameter is set to 2 (i.e. the service controlled

# by the fourth output is the auxiliary output)

if on, the auxiliary output will have been turned on manu-

if flashing, the auxiliary output will have been turned on remotely (parameter i5)

#### parameter u1 is set to 3 (i.e. the service controlled by the fourth output is compressor 2)

if on, compressor 2 is on if flashing, compressor 2 delay is ongoing (parameter C9)

CODE MEANING the key and/or operational setpoint are blocked (parameter r3), refer to paragraph 2.11

the quantity for display is not available (e.g. the probe is absent)

# ALARMS

#### 7.1 Alarms CODE MEANING

| AL | Minimum temperature alarm (HACCP alarm |
|----|--|
|    | Remedies:                              |

•check the alarm temperature

• check parameters A0, A1 and A2

Main consequences:

- ${\color{red}\bullet}$  if parameter A0 is set to 0 or if parameter P4 is set to 1 and parameter A0 is set to 2, the device records the alarms
- if parameter u1 is set to 4, the alarm output will be activated
- АН Maximum temperature alarm (HACCP alarm) Remedies
  - check the alarm temperature
  - check parameters A3, A4 and A5

- if parameter A3 is set to 0 or if parameter P4 is set to 1 and
- parameter A3 is set to 1, the device records the alarms if parameter u1 is set to 4, the alarm output will be acti-

# Microport input alarm (HACCP alarm)

Remedies

check the causes which activated the input

check parameters i0, i1 andi4

Main consequences: • the outcome set by parameter i0

- if parameter i4 is set to 1, the device records the alarms, providing parameter i2 is not set to -1
- if parameter u1 is set to 4, the alarm output will be activated

#### Power failure alarm (HACCP alarm) PF

Remedies:

check the causes of the power failure

press any key Main consequences:

• the device records the alarm; see also parameter AA • if parameter u1 is set to 4, the alarm output will be activated; pressing any key will also deactivate the alarm

#### output iΑ Input malfunction alarm (only if parameter P4 is set to 3) Remedies:

check the causes which activated the input

• check parameters i5 and i6

Main consequences

- if parameter i5 is set to 4, the device will continue to operate as normal
- if parameter i5 is set to 5, the compressor will be switched
- if parameter u1 is set to 4, the alarm output will be activated
- iSd Device blocked alarm (only if parameter P4 is set to 3)
  - check the causes which activated the input malfunction
  - switch the device off then on, or disconnect the power supply
  - check parameters i5, i6, i7, i8 and i9

Main consequences

- the regulators will be switched off
- if parameter u1 is set to 4, the alarm output will be activated
- СОН Condenser overheating alarm (only if parameter P4 is set to 31

Remedies:

- · check the condenser temperature
- check parameter C6

Main consequences

• if parameter u1 is set to 4, the alarm output will be activated

CSd Compressor blocked alarm (only if parameter P4 is set to 3) Remedies:

- check the condenser temperature
- switch the device off and then on again: if on switching back on again the condenser temperature is still above the value established by parameter C7, it will be necessary to disconnect the power supply and clean the condenser
- check parameter C7

Main consequences

- the compressor and evaporator fan will be switched off
- if parameter u1 is set to 4, the alarm output will be acti-

When the cause that triggered the alarm has been resolved, the device will restore normal operation, except for the following alarm states:

- the power failure alarm (code "PF") requiring that a key be pressed; if parameter u1 is set to 4 (i.e. the service controlled by the fourth output is the alarm output), pressing any key will also deactivate the alarm output
- the device blocked alarm (code "iSd") which requires the device be switched off or the power supply disconnected
- the compressor blocked alarm (code "CSd") which requires the device be switched off or the power supply disconnected.

# 8 INTERNAL DIAGNOSTICS

#### 8.1 Internal Diagnostics

CODE MEANING

Cabinet probe error Pr1

- Remedies:
- see parameter P0 check probe integrity
- check probe-device connection
- check the cabinet temperature

Main consequences

- the activity of the compressor will depend on parameters C4 and C5
- defrosting will never be activated
- if parameter u1 is set to 4, the alarm output will be activated
- if parameter u1 is set to 5 or 6, the fourth output will be deactivated
- Pr2

Evaporator probe error

Remedies:

• the same as for the previous case, but in relation to the evaporator probe

Main consequences

- if parameter P3 is set to 1, defrosting will last for the duration established by parameter d3
- if parameter P3 is set to 1 and parameter d8 is set to 2, the device will operate as though parameter d8 was set to 0
- if parameter F0 is set to 3 or 4, the device will operate as though the parameter was set to 2
- if parameter u1 is set to 4, the alarm output will be activated
- Auxiliary probe error (only if parameter P4 is set to 1 or 2) Remedies: the same as for the previous case, but in relation to the

auxiliary probe Main consequences:

• if parameter u1 is set to 4, the alarm output will be acti-

rtc

Clock erro

Remedies:

vated

- reset the date and time Main consequences
- if parameter d8 is set to 3, the device will operate as though

the parameter was set to 0

- functions relating to date and time will not be available (Energy Saving, HACCP, etc ...)
- if parameter u1 is set to 4, the alarm output will be acti-

When the cause of the alarm is resolved, the device restores normal operation, except for clock errors (code "rtc") which require the date and time to be reset

#### **TECHNICAL DATA**

#### 9.1 Technical data

Case: grey self-extinguishing.

Front panel protection classification: IP 65.

Connections: screw terminal blocks (power supply, inputs and outputs), 6 pin connector (serial port; by request), 4 pin connector (to remote indicator; by request); spring extractable terminal blocks (power supply, inputs and outputs) by request.

Operating temperature: from 0 to 55°C (from 32 to 131°F, 10 ... 90% relative humidity, without condensation).

Power supply: 12 VAC/DC (or 12-24 VAC/DC), 50/60 Hz, 3.5 VA (approximate) or 115 ... 230 VAC, 50/60 Hz, 5 VA (approximate).

Maintenance of clock data in absence of power supply: 24 hours will battery fully charged.

Battery charge time: 2 minutes without interruptions (the battery is charged by the device power supply).

Alarm buzzer: available by request.

Sensor inputs: 2 (cabinet probe and evaporator probe) for PTC/ NTC probes

Digital inputs: 1 (microport) for NAVNC contact (clean contact, 5 V, 1 mA); fourth input can be configured as sensor input (display probe or condenser probe, for PTC/NTC probes) or digital input (multifunction, clean contact, 5 V, 1 mA).

Sensor range: from -50.0 to 150.0°C (from -50 to 300°F) for PTC probes, from -40.0 to 105.0°C (from -40 to 220°F) for NTC probes.

Sensitivity: 0.1°C/1°C/1°F. Digital outputs: 4 relays:

- compressor relay: 16 A res. @ 250 VAC (exchange contacts)
- defrost relay: 8 A res. @ 250 VAC (exchange contacts)
- evaporator fan relay: 8 A res. @ 250 VAC
- fourth output: 8 A res. @ 250 VAC (exchange contacts

#### The maximum permitted current on loads is 10 A.

Serial port: port for communicating with the monitoring system (by means of a serial interface, via TTL, using the MODBUS communication protocol) or with the programming key; by request.

Other communication ports: port for communicating with the remote indicator; by request.

# 10 OPERATIONAL SETPOINT AND CONFIGURATION PARAMETERSE 10.1 Operational setpoint

- (1) the unit of measurement depends on parameter P2
- (2) set appropriate regulator parameters after altering parameter P2
- if parameter u1 is set to 3, the service controlled by the fourth output will be compressor 2: compressor 1 and compressor 2 are referred to as "compressor"; compressor 2 operates in parallel with compressor 1, regardless of parameter C9
- (4) the parameter is even effective after power supply interruption, such as when the device is switched on
- 5) the time period established by the parameter is counted even while in stand-by mode
- (6) if parameter C1 is set to 0, the cabinet probe error resolution delay will be 2 minutes in any case
- (7) the parameter differential is 2.0°C/4°F
- (8) if, on device start-up, the condenser temperature is already above that established by parameter C7, parameter C8 will have no effect
- (9) the device stores the defrost interval count every 30 minutes; altering parameter d0 has the effect of concluding the previous defrost interval or manual defrost activation
- [10] the display is restored to normal operation when, the evaporator fan stop is concluded, the cabinet temperature drops below that which blocked the display (or if a temperature alarm occurs)
- (11) if parameter P3 is set to 0 or 2, the device will operate as though parameter d8 was set to 0
- [12] if, on defrost activation, the compressor on duration is less than the time established by parameter dA, the compressor will remain on for the fraction of time required to complete it
- (13) if parameter P3 is set to 0, the device will operate as though parameter A0 was set to 0, but will not record the alarm
- (14) if parameter P4 is set to 0 or 3, the device will operate as though the parameter was set to 0, but will not record the alarm
- (15) during defrosting, drip draining and ventilator fan stop, there are no temperature alarms, if said occur following defrost activation
- (16) there is no maximum temperature alarm while microport input is enabled, if occurring after input activation
- (17) if parameter P3 is set to 0, the device will operate as though parameter F0 was set to 2
- [18] the compressor is switched off 10 s after activation of the input; if the input is activated during defrosting or evaporator fan stop, activation will have no effect on the compressor
- (19) the device records alarms occurring after the time established by parameter i2, if parameter i2 is set to -1, the device does not record the alarms
- (20) ensure that the time established by parameter i7 s less than that established by parameter i9  $\,$
- (21) in order to avoid damage to the service connected, modify the parameter while in stand-by mode
- (22) if the fourth output terminals are connected to the fourth input terminals of several devices, it will be possible to synchronise defrosting (providing that in each device, parameter P4 is set to 3, that parameter i5 is set to 1 and parameter u1 is set to 7); in this case, drip-drain duration counting starts when defrosting of the last device is concluded
- (23) it is recommended that parameter d7 for each device be set to the same value (different from 0 min); similarly, it is recommended to set parameter F3 for each device to the same value
- [24] if parameter u2 is set to 0, switching off the device may cause switching off of the cabinet light or the auxiliary output (the service will remain off on subsequent switching on of the device); if parameter u2 is set to 1, switching off the device does not cause switching off of the cabinet light or the auxiliary output (the service remains on on subsequent switching on of the device).

The device must be disposed of in accordance with local regulations pertaining to the collection of electrical and electronic appliances.
